PROFESSIONAL SUMMARY

AI/ML Engineer with 3+ years of hands-on experience shipping production LLM systems — retrieval-augmented generation, multi-agent workflows, fine-tuned open-weight models, and end-to-end AI automation. Top Rated on Upwork with a consistent 5-star record across data science and applied AI engagements. Currently architecting an AI-assisted travel booking platform covering flight APIs, payments, and document automation. Seeking senior remote/contract engagements building LLM and agentic AI products.

KEY SKILLS

- **LLMs & Fine-Tuning:** LoRA / QLoRA, PEFT, supervised & instruction fine-tuning, dataset curation, quantization (GGUF), evaluation harnesses
- **RAG Systems:** Chunking strategies, embeddings, vector stores (pgvector, FAISS, Chroma), hybrid search, reranking, grounded citation answers
- **Agentic AI & Automation:** Multi-agent orchestration, tool / function calling, MCP, LangChain, LangGraph, CrewAI, workflow automation
- **Model Serving & Infrastructure:** Ollama, vLLM, Hugging Face Transformers, FastAPI, Docker, GPU rental (RunPod, Vast.ai), self-hosted inference
- **Machine & Deep Learning:** CNN, KNN, time series clustering, supervised & unsupervised learning, gradient boosting, ensembling, model fine-tuning
- **Data Engineering & Analysis:** Pandas, NumPy, PySpark, SQL / PostgreSQL (Supabase), web scraping, EDA, Matplotlib, Tableau
- **Programming:** Python, SQL
- **APIs & Platforms:** OpenAI, Anthropic Claude, DeepSeek, Qwen, Supabase, Duffel, Amadeus, Mollie, GoCardless, Wise

PROFESSIONAL EXPERIENCE

- **Madina Travels** Rawalpindi, Pakistan & Barcelona, Spain
AI/ML Engineer & Founder 2024 - Present
 - **AI-assisted booking platform (SkyNest):** Architected and built a flight and Umrah booking platform on Supabase/PostgreSQL, integrating Duffel and Amadeus flight APIs with a mock-first strategy and EU payment rails (Mollie, GoCardless, Wise Business).
 - **Production coding-agent pipeline:** Authored a production-grade AI coding agent specification that drives feature development, schema migrations, and QA across the platform codebase.
 - **Document AI automation:** Built LLM-powered extraction, validation, and checklist generation for visa and Umrah documentation, sharply reducing manual review time per case.
 - **Legacy system integration:** Prototyped Python middleware and RPA to reach a legacy Galileo GDS where no modern API was available.
- **Upwork** Remote
Freelance AI/ML Engineer — Top Rated 2023 - Present
 - **RAG & document intelligence:** Built systems that ingest large PDF corpora, index them into vector stores, and return grounded, cited answers over private datasets.
 - **Model fine-tuning:** Fine-tuned deep learning models for measurable accuracy gains on client data, including data-efficient training loops and evaluation.
 - **LLM application development:** Delivered chatbot and OpenAI ChatCompletion integrations, prompt pipelines, and structured-output tooling for downstream automation.
 - **Applied ML & data engineering:** Time series clustering, speech recognition for domain-specific jargon, custom JPEG compression algorithm, octave-convolution CNN work, Tableau Prep to PySpark migration, and large-scale data cleaning and visualization.
 - Maintained 5-star ratings and repeat engagements across a broad client portfolio.

SELECTED PROJECTS

- **Multi-Agent “Proposal Autopsy Council” — Band of Agents Hackathon (lablab.ai):** Six-agent architecture that dissects lost B2B proposals and returns structured post-mortems. Built on Featherless AI (Qwen2.5-72B) and the Thenvoi platform, with role-specialized agents, shared state, critique loops, and JSON-structured output.
- **Local LLM Inference Lab:** Self-hosted open-weight models (DeepSeek, Qwen, Llama family) via Ollama on a 128 GB / 16-core workstation; benchmarked local inference against rented cloud GPUs (Vast.ai, RunPod) for cost and latency tradeoffs, using quantized GGUF builds served behind FastAPI for private, data-resident deployments.
- **March Machine Learning Mania 2026 — Kaggle:** Engineered a competitive prediction pipeline using MOV-Elo ratings, Pythagorean efficiency, and Massey Ordinals, with symmetry augmentation and temperature-scaled ensembling for calibrated win probabilities.
- **AI Agent Use-Case Knowledge Base:** Designed a structured, searchable catalog of agentic AI use cases — a “Wikipedia of AI agent use cases” — generated and maintained through an agentic coding workflow.
- **Interactive ML/DL Concept Glossaries:** Built interactive learning tools covering 44 deep learning concepts with analogy-driven explanations, used for structured self-study and teaching.

CERTIFICATIONS

- IBM Data Science Professional Certificate
- Databases and SQL for Data Science
- Machine Learning
- Deep Learning
- Data Visualization with Python

WORK / INTERNSHIPS

- **Omdena** Remote
 - *Collaborator* *January 2023 - January 2024*
 - **Sri Lankan Autism Prediction Project:** Collaborated on an applied AI project predicting autism indicators in toddlers, contributing to modelling and evaluation.

EDUCATION

- **Virtual University of Pakistan** Pakistan
 - *Ongoing coursework in Statistics & Economics* *Present*
- **University of Sargodha** Sargodha, Pakistan
 - *Bachelor’s degree in Economics* *2018 - 2020*

LANGUAGES

- **English:** Fluent
- **Urdu:** Native or Bilingual
